

Verifier's Opinion Statement

15th April 20256, Valid for 12 months from this date

Auditel is a management consultancy that is suitably qualified in carbon emissions measurement and verification.

Speedy Hire have submitted their PAS 2080:2023 Carbon Management System (CMS) for independent third party validation and verification of the system as applied. The assurance has been conducted by Auditel.

Objective

The purposes of this verification exercise are to give a third-party opinion, within the bounds of the agreed materiality threshold and level of assurance:

- Whether the CO₂e emissions defined in Speedy Hire PLC's decarbonisation planning assertion are accurate;
- Whether the data upon which that assertion is based is transparent, accurate, complete, consistent and reliable.
- Whether claims of compliance of the Carbon Management System to PAS 2080 2023 can be upheld

The management of Speedy Hire PLC is responsible for the organisation's information system, the development, maintenance and accuracy of such records and all reporting procedures related to that system. For the avoidance of doubt, this includes compliance to PAS 2080:2023 for the Carbon Management System and the outputs thereof.

The level of assurance agreed for this assignment is a limited level of assurance.

Conclusion

Auditel adopted a risk-based sample assessment of the supplied evidence and data, along with any calculations or operational outcomes based thereon.

The following Reporting Principles have been met - Completeness, Consistency, Accuracy, Transparency, Relevance. Materiality level applied for verification is 5% of CMS forecasted impact

Auditel concludes with limited assurance that no evidence has been found that the presented PAS 2080: 2023 assertion:

- is not materially correct;
- is not a fair representation of the supplied GHG emissions data and information;
- is not prepared in accordance with the criteria listed above.

We planned and performed our work to obtain the information, explanations and evidence that we considered necessary to provide a limited level of assurance that the GHG emissions are fairly stated. It is **Verified with the following comment**

valid for one year from issue

Comment - The Speedy Hire CMS is implemented and the system elements, linkages, risk treatment, improvement and development all in evidence. It was possible to verify implementation of the CMS for the second year of operations and to apply an extended sample of compliance evidence. The verification at the completion of the next reporting period should provide evidence of a mature and effective operation of the CMS if it continues to develop in the compliant manner so far tested.
